We are asking you to be in a science study. Today, we will be (taking a piece of your skin) or (drawing your blood) or (having you spit in a tube) for testing. The piece of skin will be really small. The amount of blood or spit will be really small. We are doing the test to see if you have a health problem with your joints or your bones.

We would like to save the spit or skin or blood to use in a science study. We will put it in a freezer so that it can be saved for a long time. Later, we will thaw it out and do a science study.

You do not have to take part in this study if you don't want to. No one will be mad at you.
